Notes:

1. PS I/O is a combination of PS MIO and PS DDRIO.
2. Packages with the same last letter and number sequence, e.g., A484, are footprint compatible with all other UltraScale devices with the same sequence.
3. For full part number details, see the Ordering Information section in [DS891, Zynq UltraScale+ MPSoC Overview](#).
4. GTH transceivers in the C784 package support data rates up to 12.5Gb/s.

- Notes:
- Supports PCI Express Base 2.1 specification at Gen1 and Gen2 data rates.
 - Represents the maximum number of transceivers available. Note that the majority of devices are available without transceivers. See the Package section of this table for details.
 - Leaded package option available for all packages. See [DS180](#), *7 Series FPGAs Overview* for package details.
 - Device migration is available within the Artix-7 family for like packages but is not supported between other 7 series families.
 - Devices in FGG484 and FBG484 are footprint compatible.
 - Devices in FGG676 and FBG676 are footprint compatible.

Notes:

- Each slice contains four LUTs and eight flip-flops.
- Spartan-6 FPGA logic cell ratings reflect the increased logic capacity offered by the 6-input LUT architecture.
- Block RAM are fundamentally 18Kb in size. Each block can also be used as two independent 9 Kb blocks.
- Each CMT contains two DCMs and one PLL.
- Each DSP48A1 slice contains an 18x18 multiplier, an adder, and an accumulator.
- The LX device pinouts are not compatible with the LXT device pinouts.
- CPG196 and TQG144 do not have memory controller support. -3N is not available for these packages.
- CSG225 has X8 memory controller support in the LX9 and LX16 devices. There is no memory controller in the LX4 devices.
- Devices in the FG(G)484 and CSG484 packages have support for two memory controllers.
- Devices with -3N speed grade do not support MCB functionality.
